SAS No. 99

SAS No. 99 as printed below does not reproduce the appendix or an exhibit to the standard. The appendix, "Examples of Fraud Risk Factors," can be found on the AICPA Web site at www.aicpa.org/antifraud/risk. The exhibit, "Management Anti-fraud Programs and Controls," can be found at www.aicpa.org/antifraud/management.

SAS No. 99—Consideration of Fraud in a Financial Statement Audit

INTRODUCTION AND OVERVIEW

1. Statement on Auditing Standards (SAS) No. 54, “A Professional Standards, vol. 1, AU sec. 110, 02, ‘Responsibilities and Functions of the Independent Auditor’,” states, "The auditor has a responsibility to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether caused by error or fraud..." This Statement establishes standards and provides guidance to auditors in fulfilling that responsibility, as it relates to fraud, in an audit of financial statements conducted in accordance with generally accepted auditing standards (GAAS).

2. The following is an overview of the organization and content of this statement:
   - Description and characteristics of fraud. This section describes fraud and its characteristics. (See paragraphs 5 through 12.)
   - The importance of exercising professional skepticism. This section discusses the need for auditors to exercise professional skepticism when considering the possibility that a material misstatement due to fraud could be present. (See paragraphs 13 through 18.)
   - Identifying risks that may result in a material misstatement due to fraud. This section requires the auditor to use the information gathered to identify risks that may result in a material misstatement due to fraud. (See paragraphs 35 through 42.)
   - Assessing the identified risks after taking into account an evaluation of the entity’s programs and controls. This section requires the auditor to evaluate the entity’s programs and controls that address the identified risks of material misstatement due to fraud, and to assess the risks taking into account this evaluation. (See paragraphs 43 through 49.)
   - Responding to the results of the assessment. This section emphasizes that the auditor’s response to the risks of material misstatement due to fraud involves the application of professional skepticism. (See paragraphs 46 through 49.)

OFFICIAL RELEASES

dards, vol. 1, AU sec. 311); SAS No. 47, Audit Risk and Materiality in Conducting an Audit (AICPA, Professional Standards, vol. 1, AU sec. 312); and SAS No. 55, Consideration of Internal Control in a Financial Statement Audit (AICPA, Professional Standards, vol. 1, AU sec. 319), as amended. Even though some requirements and guidance set forth in this Statement are presented in a manner that suggests a sequential audit process, auditing in fact involves a continuous process of gathering, updating, and analyzing information throughout the audit. Accordingly the sequence of the requirements and guidance in this Statement may be implemented differently among auditors.

4. Although this Statement focuses on the auditor's consideration of fraud in an audit of financial statements, it is management's responsibility to design and implement programs and controls to prevent, deter, and detect fraud. That responsibility is described in SAS No. 1 (AU sec. 110.03), which states, "Management is responsible for adopting sound accounting policies and practices and for maintaining internal control that will, among other things, initiate, record, process, and report transactions (as well as events and conditions) consistent with management's assertions embodied in the financial statements." Management, along with those who have responsibility for oversight of the financial reporting process (such as the audit committee, board of trustees, board of directors, or the owner in owner-managed entities), should set the proper tone; create and maintain a culture of honesty and high ethical standards; and establish appropriate controls to prevent, deter, and detect fraud. When management and those responsible for the oversight of the financial reporting process fail to fulfill their responsibilities, the opportunities to commit fraud can be reduced significantly.

DESCRIPTION AND CHARACTERISTICS OF FRAUD

5. Fraud is a broad legal concept and auditors do not make legal determinations of whether fraud has occurred. Rather, the auditor's interest specifically relates to acts that result in a material misstatement of the financial statements. The primary factor that distinguishes fraud from error is whether the underlying action that results in the misstatement of the financial statements is intentional or unintentional. For purposes of the Statement, fraud is an intentional act that results in a material misstatement in financial statements that are the subject of an audit.

6. Two types of misstatements are relevant to the auditor's consideration of fraud—misstatements arising from fraudulent financial reporting and misstatements arising from misappropriation of assets. Misstatements arising from fraudulent financial reporting are intentional misstatements or omissions of amounts or disclosures in financial statements designed to deceive financial statement users where the effect of the misstatement is not to be presented, in all material respects, in conformity with generally accepted accounting principles (GAAP). Fraudulent financial reporting may be accomplished by the following:

—Manipulation, falsification, or alteration of accounting records or supporting documents from which financial statements are prepared
—Misrepresentation or intentional omission from financial statements prepared for issuance
—Misappropriation of assets as sets (sometimes referred to as theft or defalcation)
—Misappropriation of assets in violation of legal requirements
—Misappropriation of assets as sets (when the effect of the fraud is to cause the financial statements to be materially false or misleading)
—Misappropriation of assets as sets (when the effect of the fraud is to cause the financial statements to be materially false or misleading)

In its October 1987 report, the National Commission on Fraudulent Financial Reporting, also known as the Treadway Commission, noted, "The responsibility for reliable financial reporting resides first and foremost at the corporate level. Top management, starting with the chief executive officer, sets the tone and establishes the financial reporting environment. Therefore, reducing the risk of fraudulent financial reporting must begin with the reporting company." 4

7. Intent is often difficult to determine, particularly in matters involving accounting estimates and the application of accounting principles. For example, unreasonable accounting estimates may be unintentional or may be the result of an intentional attempt to misstate the financial statements. Although an audit is not designed to determine intent, the auditor has a responsibility to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether the misstatement is intentional or not.

8. Management has a unique ability to perpetrate fraud because it frequently is in a position to directly or indirectly manipulate accounting records and present fraudulent financial information. Fraudulent financial reporting often involves management override of controls that otherwise may appear to be operating effectively. Management can either direct employees to perpetrate fraud or solicits their help in carrying it out. In addition, management personnel at a component of the entity may be in a position to manipulate records of the component in a manner that causes a material misstatement in the consolidated financial statements of the entity. Management override of controls can occur in unpredictable ways.

9. For example, an important contract es engaged in fraud will take steps to conceal the fraud from the auditors and others within and outside the organization. Fraud may be concealed by withholding evidence or misrepresenting information in response to inquiries or by falsifying documentation. For example, management that engages in fraudulent financial reporting might alter shipping documents. Employees or members of management who are involved in fraudulent activity may conceal their thefts by forgeries signatures or falsifying electronic approvals on disbursement authorizations. An audit conducted in accordance with GAAS rarely involves the audit documentation of such documentation, nor are auditors trained as or expected to be experts in such documentation. In addition, an auditor may not discover the existence of a modification of documentation through the accounting records of the entity or a third party has not disclosed.

10. Fraud also may be concealed through collusion among management, employees, or third parties. Collusion may cause the auditor who has properly performed the audit to conclude that evidence provided is persuasive when it is, in fact, false. For example, through collusion, false evidence that controls have been operating effectively may be presented to the auditor, or consistent with the auditor's independent judgment, may be presented to the auditor by more than one individual within the entity to explain an unexpected result of an analytical procedure. As another example, the auditor may receive a false confirmation from a third party that is in collusion with management or other offending employees.

11. Although fraud is usually concealed and management's intent is difficult to determine, the presence of certain conditions may suggest to the auditor the possibility that fraud may exist. For example, an auditor should consider the possibility that a misstatement is being made, a subsidiary ledger may not be satisfactorily reconciled to its control account, or the results of an analytical procedure performed during the audit may not be consistent with expectations. However, these conditions may be the result of circumstances other than fraud.

4 Fraud has been committed by management override of existing controls through such techniques as (a) recording fictitious journal entries, particularly those recorded close to the end of an accounting period to manipulate operating results, (b) intentionally basing assumptions and judgments used to estimate account balances, and (c) altering records and terms related to significant and unusual transactions.

106 JOURNAL OF ACCOUNTANCY January 2003
Documents may legitimately have been lost or misfiled; the subsidiary ledger may be out of balance with its control account because of an unintentional accounting error; and unexpected analytical relationships may be the result of unanticipated changes in underlying economic factors. Even reports of alleged fraud may not always be reliable because an employee or outsider may be mistaken or may be motivated for unknown reasons to make a false allegation.

12. As indicated in paragraph 1, the auditor has a responsibility to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether caused by fraud or error.  However, absolute assurance is not attainable and thus even a properly planned and performed audit may not detect a material misstatement resulting from a fraud. A material misstatement may not be detected because of the nature of audit evidence or because the characteristics of fraud as discussed above may cause the auditor to rely unknowingly on audit evidence that appears honest and is, in fact, false and fraudulent. Furthermore, audit procedures that are effective for detecting an error may be ineffective for detecting fraud.

THE IMPORTANCE OF EXERCISING PROFESSIONAL SKEPTICISM

13. Due professional care requires the auditor to exercise professional skepticism. See SAS No. 1, Codification of Auditing Standards and Procedures (AICPA, Professional Standards, vol. 1, AL sec. 230.07–09, “Due Professional Care in the Performance of Work”). Because of the characteristics of fraud, the auditor's exercise of professional skepticism is important when considering the risk of material misstatement due to fraud. Professional skepticism is an attitude that includes a questioning mind and a critical assessment of audit evidence. The auditor should consider the engagement with a mindset that recognizes the possibility that a material misstatement due to fraud could be present, regardless of any past experience with the entity and regardless of the auditor's belief about management's honesty and integrity. Furthermore, professional skepticism requires an ongoing questioning of whether the information and evidence obtained suggests that a material misstatement due to fraud has occurred. In exercising professional skepticism in gathering and evaluating evidence, the auditor should not be satisfied with less-than-persuasive evidence because of a belief that management is honest.

DISCUSSION AMONG ENGAGEMENT PERSONNEL REGARDING THE RISKS OF MATERIAL MISSTATEMENT DUE TO FRAUD

14. Prior to or in conjunction with the information-gathering procedures described in paragraphs 19 through 34 of this Statement, members of the audit team should discuss the potential for misstatement due to fraud. The discussion should include:

- An exchange of ideas or "brainstorming" among the audit team members, including the auditor with final responsibility for the audit, about how and where they believe the entity's financial statements might be susceptible to material misstatement due to fraud, how management could perpetrate and conceal fraudulent financial reporting, and how assets of the entity could be misappropriated. (See paragraph 15.)
- An emphasis on the importance of maintaining the proper state of mind throughout the audit regarding the potential for material misstatement due to fraud. (See paragraph 16.)

15. The discussion among the audit team members about the susceptibility of the entity's financial statements to material misstatement due to fraud should include a consideration of the known external and internal factors affecting the entity that might (a) create incentives/pressures for management and others to commit fraud, (b) provide the opportunity for fraud, and (c) indicate a culture or environment that enables the management to rationalize committing fraud. The discussion should occur with an attitude that includes a questioning mind as described in paragraph 16 and, for this purpose, setting aside any prior beliefs the audit team members may have that management is honest and has integrity. In this regard, the discussion should include a consideration of the risk of management override of controls. Finally, the discussion should include how the auditor might respond to the susceptibility of the entity's financial statements to material misstatement due to fraud.

16. The discussion among the audit team members should emphasize the need to maintain a questioning mind and to exercise professional skepticism in gathering and evaluating evidence throughout the audit, as described in paragraph 13. This should lead the audit team members to continually be alert for information or other conditions (such as those presented in paragraph 68) that indicate a material misstatement due to fraud may have occurred. It should also lead the audit team members to thoroughly probe the issues that evidence as necessary, and consult with other team members and, if appropriate, experts in the firm, rather than rationalize or dismiss information or other conditions that indicate a material misstatement due to fraud may have occurred.

17. Although professional judgment should be used in determining which audit team members should be included in the discussion, the discussion process should involve the key members of the audit team. A number of factors will influence the extent of the discussion and how it should occur. For example, if the audit involves more than one location, there could be multiple discussions with team members in differing locations. Another factor to consider in planning the discussions is whether to include specialists assigned to the audit team. For example, if the auditor has determined that professional possessing information technology skills is needed on the audit team (see SAS No. 55 [ASU sec. 319.32]), it may be useful to include that individual in the discussion.

18. Communication among the audit team members about the risks of material misstatement due to fraud also should continue throughout the audit—for example, in evaluating the risks of material misstatement due to fraud at or near the completion of the field work. (See paragraph 74 and footnote 28.)

OB TAINING THE INFORMATION NEEDED TO IDENTIFY THE RISKS OF MATERIAL MISSTATEMENT DUE TO FRAUD

19. SAS No. 22 (AU sec. 311.06–311.08), provides guidance about how the auditor obtains knowledge about the entity's business and the industry in which it operates. In performing that work, information may come to the auditor's attention that should be considered in identifying risks of material misstatement due to fraud. As part of this work, the auditor should perform the following procedures to obtain information that is used in paragraphs 35 through 42 to identify the risks of material misstatement due to fraud:

- a. Make inquiries of management and others within the entity to obtain their views about the risks of fraud and how they are addressed. (See paragraphs 20 through 27.)
- b. Consider any unusual or unexpected relationships that have been identified in performing analytical procedures in planning the audit. (See paragraphs 28 through 30.)
- c. Consider whether one or more fraud risk factors exist. (See paragraphs 31 through 33, and the Appendix.)
- d. Consider other information that may be helpful in the identification of risks of material misstatement due to fraud. (See paragraph 34.)

Making Inquiries of Management and Others Within the Entity About the Risks of Fraud

20. The auditor should inquire of management about:

- Whether management has knowledge of any fraud or suspected fraud affecting the entity
- Whether management is aware of allegations of fraud or suspected fraud affecting the entity, for example, received in communications from former employees, former employees, analysts, regulators, or others
- Management's understanding of the risks of fraud in the entity, including any specific fraud risks the entity has identified or account books and records, for example, the number of times for which a risk of fraud may be likely to exist
- Programs and controls the entity has established to mitigate specific fraud risks the entity has identified, or that otherwise help to prevent, detect, or deter fraud, such as the examples of programs and controls an entity may implement to prevent, detect, and deter fraud, see the exhibit titled "Management AntiFraud Programs and Controls" in the above-mentioned statement.

In addition to these inquiries, SAS No. 85, Management Representations (AICPA, Professional Standards, vol. 1, AL sec. 333), as amended, defines internal control and its five integrated components (the control environment, risk assessment, control activities, information and communication, and monitoring). Entity programs and controls intended to address the risks of fraud may be part of any of the five components discussed in SAS No. 55.
For an entity with multiple locations, (a) the nature and extent of monitoring of operating locations or business segments, and (b) whether there are particular operating locations or business segments for which a risk of fraud may be more likely to exist.

Whether and how management communicates to employees its views on business practices and ethical behavior

1. The inquiries of management also should include whether management has reported to the audit committee or others with equivalent authority and responsibility48 (hereafter referred to as the audit committee) on how the entity’s internal control serves to prevent, deter, or detect significant misstatement.

2. The auditor also should inquire directly of the audit committee (or at least its chair) regarding the audit committee’s views about the risks of fraud and whether the audit committee has knowledge of any fraud or suspected fraud affecting the entity. An entity’s audit committee sometimes assumes an active role in oversight of the entity’s assessment of the risks of fraud and the programs and controls the entity has established to mitigate these risks. The auditor should obtain an understanding of how the audit committee exercises oversight activities in this area.

3. For entities that have an internal audit function, the auditor also should inquire of appropriate internal audit personnel about their views about the risks of fraud, whether they have performed any procedures to identify or detect fraud during the year, whether management has satisfactorily responded to any findings resulting from these procedures, and whether the internal auditors have knowledge of any fraud or suspected fraud.

4. In addition to the inquiries outlined in paragraphs 20 through 23, the auditor should inquire of others within the entity about the existence or suspicion of fraud. The auditor should use professional judgment to determine whether those others within the entity to whom inquiries should be directed and the extent of such inquiries. In making this determination, the auditor should consider whether others within the entity may be able to provide information that will be helpful to the auditor in identifying risks of material misstatement due to fraud—for example, others who may have additional knowledge about or be able to corroborate risks of fraud identified in the discussions with management (see paragraph 20) or the audit committee (see paragraph 22).

5. Examples of others within the entity to whom the auditor may wish to direct these inquiries include:

   a. Employees with varying levels of authority within the entity, including, for example, entity personnel with whom the auditor comes into contact during the course of the audit in obtaining an understanding of the entity’s systems and internal control, in obtaining inventory or performing cutoff procedures, or in obtaining explanations for fluctuations noted as a result of analytical procedures.

6. Operating personnel not directly involved in the financial reporting process.

7. Employees involved in initiating, recording, or processing complex or unusual transactions—for example, a sales transaction with multiple elements, or a significant related party transaction.

8. In-house legal counsel.

9. The auditor’s inquiries of management and others within the entity are important because fraud often is uncovered through information received in response to inquiries. One reason for this is that such inquiries may provide individuals with an opportunity to convey information to the auditor that otherwise might not be communicated. Making inquiries of others within the entity in addition to management, may be useful in providing the auditor with a perspective that is different from that of individuals involved in the financial reporting process. The responses to these other inquiries may serve to corroborate or refine the responses to inquiries of management, or alternatively, might provide information regarding the possibility of management override of controls—for example, a response from an employee indicating an unusual change in the way transactions have been processed. In addition, the auditor may obtain information from these inquiries regarding how effectively management has communicated standards of ethical behavior to individuals throughout the organization.

10. The auditor should be aware when evaluating management’s responses to the inquiries discussed in paragraph 20 that management is often in the best position to know about fraud. The auditor should use professional judgment in deciding when it is necessary to corroborate responses to inquiries with other information. However, when responses are inconsistent among inquiries, the auditor should consider additional audit evidence to resolve the inconsistencies.

Considering the Results of the Analytical Procedures Performed in Planning the Audit

26. SAS No. 50, Analytical Procedures (AICPA, Professional Standards, vol. 1, AU sec. 329.40 and .06), requires that analytical procedures be performed in planning the audit with an objective of identifying the existence of unusual transactions or events, unusual ratios, and trends that might indicate matters that have financial statement and audit planning implications. In performing analytical procedures in planning the audit, the auditor develops expectations about plausible relationships that are reasonably expected to exist, based on the auditor’s understanding of the entity and its environment. When comparison of those expectations with recorded amounts or ratios developed from recorded amounts yields unusual or unexpected relationships, the auditor should consider those results in identifying the risks of material misstatement due to fraud.

27. In planning the audit, the auditor also should perform analytical procedures relating to revenue with the objective of identifying unusual or unexpected relationships involving revenue accounts that may indicate a material misstatement due to revenue misstatement.

Example of such an analytical procedure that addresses this objective is a comparison of sales volume, as determined from recorded revenue amounts, with production capacity. An excess of sales volume over production capacity may be indicative of recording fictitious sales. As another example, a trend analysis of revenues by month and sales returns by month during and shortly after the reporting period may indicate the existence of undisclosed sales agreements with customers to reduce revenue that would preclude revenue recognition.

Analytical procedures performed during planning may be helpful in identifying the risks of material misstatement due to fraud. However, because such analytical procedures generally use data aggregated at a high level, the results of those analytical procedures provide only a broad initial indication about whether a material misstatement of the financial statements may exist. Accordingly, the results of analytical procedures performed during planning should be considered along with other information gathered by the auditor in identifying the risks of material misstatement due to fraud.

Considering Fraud Risk Factors

31. Because fraud is usually concealed, material misstatements due to fraud are difficult to detect. Nevertheless, procedures generally used to identify events or conditions that indicate inconsistent procedures to corroborate responses to inquiries with other information. However, when responses are inconsistent among inquiries, the auditor should consider additional audit evidence to resolve the inconsistencies.
cally, the discussion among the engagement team members (see paragraphs 14 through 18) may provide information helpful in identifying such risks. In addition, the auditor should consider whether information from the results of (a) procedures relating to the acceptance and continuance of clients and engagements and (b) reviews of interim financial statements may be relevant in the identification of such risks.

Finally, as part of the consideration of audit risk at the individual account balance or class of transactions level (see SAS No. 47, AU sec. 312.24 through 312.33), the auditor should consider whether identified inherent risks would either be controls that affect the identification of risks of material misstatement due to fraud (see paragraph 39).

IDENTIFYING RISKS THAT MAY RESULT IN A MATERIAL MISSTATEMENT DUE TO FRAUD

Using the Information Gathered to Identify Risk of Material Misstatements Due to Fraud

35. In identifying risks of material misstatement due to fraud, it is helpful for the auditor to consider the information that has been gathered (see paragraphs 19 through 34) in the context of the three conditions present when a material misstatement due to fraud occurs—that is, incentives/pressures, opportunities, and attitudes/rationalizations (see paragraph 7). However, the auditor should not assume that all three conditions must be observed or evident before concluding that there are identified risks. Although the risk of material misstatement due to fraud may be greatest when all three fraud conditions are observed or evident, the auditor cannot assume that the inability to observe one or two fraud conditions indicates that there is no risk of material misstatement due to fraud. In fact, observing that individuals have the requisite attitude to commit fraud, or identifying factors that indicate a likelihood that management or other employees will rationalize committing a fraud, is difficult at best. 36. In addition, the extent to which each of the three conditions referred to above is present when fraud occurs may vary. In some instances the absence of incentives/pressures may result in a risk of material misstatement due to fraud, apart from the significance of the other two conditions. For example, an incentive/pressure to achieve an earnings level to preclude a loan default, or to "trigger" incentive compensation plan awards, may alone result in a risk of material misstatement due to fraud. In other instances, an easy opportunity to commit the fraud because of a lack of controls may be the dominant condition precipitating the risk of fraud, or an individual’s attitude or ability to rationalize unethical actions may be sufficient to motivate that individual to engage in fraud, even in the absence of significant incentives/pressures or opportunities.

37. The auditor’s identification of fraud risks may also be influenced by characteristics such as the size, complexity, and ownership attributes of the entity. For example, in the case of a larger entity, the auditor ordinarily considers factors that generally constrain improper conduct by management, such as the effectiveness of the audit committee and the internal audit function, and the existence and enforcement of a formal code of conduct for a smaller entity, some or all of these considerations may be inapplicable or less important, and management may have developed a culture that emphasizes the importance of integrity and ethical behavior through real enforcement and management example. Also, the risks of material misstatement due to fraud may vary among operating locations or business segments of an entity, requiring an identification of the risks related to specific geographical locations, segments, as well as for the entity as a whole. 38. The auditor should evaluate whether identified risks of material misstatement due to fraud can be related to specific financial-statements accounts, transactions, and related assertions, or whether they relate more pervasively to the financial statements as a whole. Relating the risks of material misstatement due to fraud to the individual accounts, classes of transactions, and assertions will assist the auditor in subsequently designing appropriate auditing procedures.

39. Certain accounts, classes of transactions, and assertions that have high inherent risk because they involve a high degree of management judgment and subjectivity also may present risks of material misstatement due to fraud because they are susceptible to manipulation by management. For example, revenues from software development may be subject to high inherent risk because of the complex accounting principles applicable to the recognition and measurement of software revenue transactions. Assets resulting from investing activities may be subject to high inherent risk because of the subjectivity and management judgment involved in estimating fair values of those investments.

40. In summary, the identification of a risk of material misstatement due to fraud involves the application of professional judgment and includes the consideration of the attributes of the risk, including:

- The type of risk that may exist, that is, whether it involves fraudulent financial reporting or misappropriation of assets
- The significance of the risk, that is, whether it is of a magnitude that could lead to result in a possible material misstatement of the financial statements
- The likelihood of the risk, that is, the likelihood that it will result in a material misstatement in the financial statements

41. Material misstatements due to fraudulent financial reporting often result from an overstatement of revenues (for example, through premature revenue recognition or recording fictitious revenues) or an understatement of revenues (for example, through improperly shifting revenues to a later period). Therefore, the auditor should ordinarily presume that there is a risk of material misstatement due to fraud relating to revenue receivables factors that affect the risk of material misstatement, due to fraud, for example, the auditor should consider the existence of specific controls over revenue

42. Even if specific risks of material misstatement due to fraud are not identified by the auditor, there is a possibility that management override of controls could occur, and accordingly, the auditor should address risks of material misstatement, due to fraud, for example, through inappropriate management override of internal controls.

43. As part of the understanding of internal control sufficient to plan the audit, the auditor should evaluate whether the entity programs and controls that address identified risks of material misstatement due to fraud have been suitably designed and placed in operation. These programs and controls may involve (a) specific controls designed to mitigate specific risks of fraud—for example, controls to address specific assets susceptible to misappropriation, and (b) broader programs designed to prevent, detect, and deter fraud—for example, programs to promote a culture of honesty and ethical behavior. The auditor should consider whether such programs and controls mitigate the identified risks of material misstatement due to fraud or whether specific control deficiencies may exacerbated the risks (see paragraph 12). The auditor should consider whether such programs and controls address the risk of material misstatement due to fraud or whether specific control deficiencies may exacerbate the risks (see paragraph 12). The auditor should consider whether such programs and controls address the risk of material misstatement due to fraud or whether specific control deficiencies may exacerbate the risks (see paragraph 12). The auditor should consider whether such programs and controls address the risk of material misstatement due to fraud or whether specific control deficiencies may exacerbate the risks (see paragraph 12). The auditor should consider whether such programs and controls address the risk of material misstatement due to fraud or whether specific control deficiencies may exacerbate the risks (see paragraph 12).

44. SAS No. 55 requires the auditor to obtain an understanding of each of the five components of internal control sufficient to plan the audit. It also notes that such knowledge should be used to identify types of potential misstatements, consider the controls that affect the risk of material misstatement, design tests of controls when applicable, and design substantive tests. Additionally, SAS No. 55 notes that controls, whether manual or automated, can be circumvented by collusion of two or more people or inappropriate management override of internal control.

45. As part of the understanding of internal control sufficient to plan the audit, the auditor should consider whether the entity programs and controls that address identified risks of material misstatement due to fraud have been suitably designed and placed in operation. These programs and controls may involve (a) specific controls designed to mitigate specific risks of fraud—for example, controls to address specific assets susceptible to misappropriation, and (b) broader programs designed to prevent, detect, and deter fraud—for example, programs to promote a culture of honesty and ethical behavior. The auditor should consider whether such programs and controls mitigate the identified risks of material misstatement due to fraud or whether specific control deficiencies may exacerbate the risks (see paragraph 12). The auditor should consider whether such programs and controls mitigate the identified risks of material misstatement due to fraud or whether specific control deficiencies may exacerbate the risks (see paragraph 12). The auditor should consider whether such programs and controls mitigate the identified risks of material misstatement due to fraud or whether specific control deficiencies may exacerbate the risks (see paragraph 12). The auditor should consider whether such programs and controls mitigate the identified risks of material misstatement due to fraud or whether specific control deficiencies may exacerbate the risks (see paragraph 12). The auditor should consider whether such programs and controls mitigate the identified risks of material misstatement due to fraud or whether specific control deficiencies may exacerbate the risks (see paragraph 12). The auditor should consider whether such programs and controls mitigate the identified risks of material misstatement due to fraud or whether specific control deficiencies may exacerbate the risks (see paragraph 12).
ture of honesty and ethical behavior, and that help to prevent, deter, and detect fraud.

45. After the auditor has evaluated whether the entity’s programs and controls that address identified risks of material misstatement due to fraud have been suitably designed and placed in operation, the auditor should assess these risks taking into account that evaluation. This assessment should be considered when developing the auditor’s response to the identified risks of material misstatement due to fraud (see paragraphs 46 through 67). 19

RESPONDING TO THE RESULTS OF THE ASSESSMENT

46. The auditor’s response to the assessment of the risks of material misstatement due to fraud involves the application of professional skepticism in gathering and evaluating evidence.

As noted in paragraph 13, professional skepticism is an attitude that includes a critical assessment of the competency and sufficiency of audit evidence. Examples of the application of professional skepticism in response to the risks of material misstatement due to fraud are (a) designing additional or different auditing procedures to obtain more reliable evidence in support of specified financial statement account balances, classes of transactions, and related assertions, and (b) obtaining additional corroborative evidence concerning matters, such as through third-party confirmation, the use of a specialist, analytical procedures, examination of documentation from independent sources, or inquiries of others within or outside the entity.

47. The auditor’s response to the assessment of the risks of material misstatement of the financial statements due to fraud is influenced by the nature and significance of the risks identified as being present (paragraphs 35 through 42) and the entity’s programs and controls that address these identified risks (paragraphs 43 through 45).

48. The auditor responds to risks of material misstatement due to fraud in the following three ways:

a. A response that has an overall effect on how the audit is conducted—that is, a response involving more general considerations apart from the specific procedures otherwise planned (see paragraph 50).

b. A response to identified risks involving the nature, timing, and extent of the auditing procedures to be performed (see paragraphs 51 through 56).

c. A response involving the performance of certain procedures to better address the risk of material misstatement due to fraud involving management override of controls, given the unpredictable ways in which such override could occur (see paragraphs 57 through 67).

49. The auditor may conclude that it would not be practicable to design auditing procedures that sufficiently address the risks of material misstatement due to fraud. In that case, withdrawal from the engagement with communication to the appropriate parties may be an appropriate course of action (see paragraph 78).

Overall Responses to the Risk of Material Misstatement

50. Judgments about the risk of material misstatement due to fraud have an overall effect on how the audit is conducted in the following ways:

• Assignment of personnel and supervision. The knowledge, skill, and ability of personnel assigned significant engagement responsibilities should be commensurate with the auditor’s assessment of the risk of material misstatement due to fraud for the engagement (see SAS No. 1, AU sec. 210.03, “Training and Proficiency of the Independent Auditor”). For example, the auditor may respond to an identified risk of financial statement due to fraud by assigning additional persons with specialized skills and knowledge, such as forensic and information technology (IT) specialists, or by assigning more experienced personnel to the engagement. In forming substantive tests of selected account balances, the auditor may need to consider whether the tests reflect the risks of material misstatement due to fraud (see SAS No. 22, AU sec. 311.11).

• Accounting principles. The auditor should consider management’s selection and application of significant accounting principles, particularly those related to subjective measurements and complex transactions. In this respect, the auditor may have a greater concern about whether the accounting principles selected and policies adopted are consistently applied in an inappropriate manner to create a material misstatement of the financial statements. In developing judgments about the quality of such principles (see SAS No. 61, Concepts of Materiality and Materiality to Financial Statements [AICPA, Professional Standards, vol. 1, AU sec. 380.11]), the auditor should consider whether their collective application indicates a bias that may create such a material misstatement of the financial statements.

• Predictability of auditing procedures. The auditor should incorporate an element of unpredictability in the selection from year to year of auditing procedures to be performed—for example, performance of tests at different locations or at locations on an unannounced basis.

Responses Involving the Nature, Timing, and Extent of Procedures to Be Performed to Address the Identified Risks

51. The auditing procedures performed in response to identified risks of material misstatement due to fraud will vary depending upon the types of risks identified and the account balances, classes of transactions, and related assertions that may be affected. These procedures may involve both substantive tests and tests of the operating effectiveness of the entity’s programs and controls. However, because management may have the ability to override controls that otherwise appear to be operating effectively (see paragraph 8), it is unlikely that audit risk can be reduced to an appropriately low level by performing only tests of control.

52. The auditor’s response to address specifically identified risks of material misstatement due to fraud may include changing the nature, timing, and extent of auditing procedures in the following ways:

• The nature of auditing procedures performed may need to be changed to obtain evidence that is more reliable or to obtain additional corroborative information. For example, more evidential matter may be needed from independent sources outside the entity, such as public-record information about the existence and nature of key customers, vendors, or counterparties in a major transaction. Also, physical observation or inspection of certain assets may become more important (see SAS No. 31, Evidential Matter, [AICPA, Professional Standards, vol. 1, AU sec. 326.15–21]). Furthermore, the auditor may choose to employ computer-assisted audit techniques to gather more extensive evidence that might elect to apply substantive tests to transactions occurring earlier in or throughout the reporting period.

• The extent of the procedures applied should reflect the assessment of the risks of material misstatement due to fraud and, for example, increasing sample sizes or performing analytical procedures at a more detailed level may be appropriate (see SAS No. 39, Audit Sampling [AICPA, Professional Standards, vol. 1, AU sec. 350.23], and SAS No. 56). Also, computer-assisted techniques may enable more extensive testing of electronic transactions and account files. Such techniques can be used to select sample transactions from key electronic files, to sort transactions with specific characteristics, or to test an entire population instead of a sample.

53. The following are examples of modification of the nature, timing, and extent of tests in response to identified risks of material misstatement due to fraud:

• Performing procedures at locations on a surprise or unannounced basis, for example, observing inventory on unexpected dates or at unannounced locations or counting cash on a surprise basis.

• Requesting that inventories be counted at the end of the reporting period or on a date closer to period end to minimize the risk of manipulation of balances in the period between the
date of completion of the count and the end of the reporting period.

- Making oral inquiries of major customers and suppliers in addition to sending written confirmations, or sending confirmation requests to a specific party within an organization.
- Performing substantive analytical procedures using disaggregated data, for example, comparing gross profit or operating margins by location, line of business, or by month to auditor-developed expectations.
- Interviewing personnel involved in activities in areas where a risk of material misstatement due to fraud has been identified to obtain their insights about the risks and how those controls address the risk (also see paragraph 24).
- If other independent auditors are auditing the financial statements of one or more subsidiaries, divisions, or branches, discussing with them the extent of substantive procedures to be performed to address the risk of material misstatement due to fraud resulting from transactions and activities among these components.

Additional Examples of Responses to Identified Risks of Misstatements Arising From Fraudulent Financial Reporting

- **Revenue recognition.** Because revenue recognition is dependent on the particular facts and circumstances, as well as accounting principles and practices that can vary by industry, the auditor ordinarily will develop auditing procedures based on the auditor’s understanding of the entity and its environment, including the composition of revenues, specific attributes of the revenue transactions, and unique industry considerations. If there is an identified risk of material misstatement due to fraud that involves improper revenue recognition, the auditor also may want to consider:

  - Designing substantive analytical procedures relating to revenue using disaggregated data, for example, comparing revenue reported by month and by product line or business segment during the current reporting period with comparable prior-periods. Computer-assisted audit techniques may be useful in identifying unusual or unexpected revenue relationships or transactions.

  - Confirming with customers certain relevant contract terms and the absence of future or continuing vendor obligations, the right to return the product, guaranteed resale amounts, and cancellation or refund provisions often are relevant in such circumstances. Inquiring of the entity’s sales and marketing personnel or in-house legal counsel regarding sales or shipments near the end of the period and their knowledge of any unusual terms or conditions associated with these transactions.

  - Being physically present at one or more locations at period end to observe goods being shipped or being readied for shipment (or returns and remote processing) and performing other appropriate sales and inventory cutoff procedures.

  - For those situations for which revenue transactions are electronically initiated, processed, and recorded, testing controls to determine whether they provide assurance that recorded revenue transactions occurred and are properly recorded.

- **Inventory quantities.** If there is an identified risk of material misstatement due to fraud that affects inventory quantities, examining the entity’s inventory records may help identify locations or items that require specific attention during or after the physical inventory count. Such a review may lead to a decision to observe inventory counts at certain locations on an unannounced basis (see paragraph 53) or to conduct inventory counts at all locations on the same date. In addition, it may be appropriate for inventory counts to be performed at or near the end of the reporting period to minimize the risk of inappropriate manipulation during the period between the count and the end of the reporting period.

- It also may be appropriate for the auditor to perform additional procedures during the observation of the count, for example, more rigorously examining the contents of boxed items, the manner in which the goods are packed (for example, hollow squares) or labeled, and the quality (that is, purity, grade, or concentration) of liquid substances such as perfumes or specialty chemicals. Using the work of a specialist may be helpful in performing the additional testing of count sheets, tags, or other records, or the retention of copies of these records, may be warranted to minimize the risk of subsequent alteration or inappropriate compilation.

Following the physical inventory count, the auditor may want to employ additional procedures directed at the quantities included in the priced out inventories to further test the reasonableness of the quantities counted—for example, comparing counts at the end of the period with prior-periods by class or category of inventory, location or other criteria, or comparison of quantities counted with perpetual records. The auditor also may consider using computer-assisted audit techniques to further test the compilation of the physical inventory counts—for example, sorting by tag number to test tag controls or by item serial number to test the possibility of item omission or duplication.

- **Inventory valuation.** The auditor may identify a risk of material misstatement due to fraud involving the development of management estimates. This risk may affect a number of accounts and assertions, including asset valuation, estimates relating to specific transactions (such as acquisitions, restructurings, or disposals of a segment of the business), and other significant accrued liabilities (such as pension and other postretirement benefit obligations, or environmental remediation liabilities). The risk may also relate to significant changes in assumptions relating to recurring estimates. As indicated in SAS No. 57, Auditing Accounting Estimates (AICPA, Professional Standards, vol. 1, AU sec. 342), estimates are based on subjective as well as objective factors and there is a potential for bias in the subjective factors, even when management’s estimation process involves competent personnel using professional judgment.

In addressing an identified risk of material misstatement due to fraud involving accounting estimates, the auditor may want to supplement the audit evidence otherwise obtained (see SAS No. 57, paragraph 342.10). In certain circumstances (for example, evaluating the reasonableness of management’s estimate of the fair value of a derivative), it may be appropriate to engage a specialist to develop an independent estimate for comparison to management’s estimate. Information gathered about the entity and its environment may help the auditor evaluate the reasonableness of such management estimates and underlying judgments and assumptions.

A retrospective review of similar management judgments and assumptions applied in prior periods (see paragraphs 63 through 65) may also provide insight about the reasonableness of judgments and assumptions supporting management estimates.

Examples of Responses to Identified Risks of Misstatements Arising From Misappropriations of Assets

- The auditor may have identified a risk of material misstatement due to fraud relating to misappropriation of assets. For example, the auditor may conclude that the risk of asset misappropriation is significant because a large amount of easily accessible cash is maintained at that location, or there are inventory items such as laptop computers at that location that can easily be moved and sold.

- The auditor’s response in a risk of material misstatement due to fraud relating to misappropriation of assets usually will be directed toward certain account balances. Although some of the audit responses noted in paragraphs 52 through 54 may be applicable, the auditor may want to consider the following procedures directed at inventory quantities, the scope of the work should be linked to the specific information about the misappropriation risk that has been identified. For example, if a particular asset is highly susceptible to misappropriation and a potential misstatement would be material to the financial statements, obtaining an understanding of the controls related to the prevention and detection of such misappropriation and testing the operating effectiveness of such controls may be warranted. In certain circumstances, physical inspection of such assets (for example, counting cash or securities) at or near the end of the reporting period may be appropriate. In addition, the use of substantive analytical procedures, such as the development by the auditor of an expected dollar amount at a high level of precision, to be compared with a recorded amount, may be effective in certain circumstances.

Responses to Further Address the Risk of Management Override of Controls

- As noted in paragraph 8, management is in a unique position to (continued on page 116)
perpetrate fraud because of its ability to directly or indirectly manipulate accounting records and prepare fraudulent financial statements by over- stating established controls that otherwise appear to be operating effectively. By its nature, manage- ment override of controls can occur in un- predictable ways. Accordingly, in addition to overall responses (paragraph 50) and responses that address specifically identified risks of material misstatement due to fraud (see paragraphs 51 through 56), the procedures described in par- graphs 58 through 67 should be performed to further address the risk of management override of controls.

58. Examining journal entries and other adjust- ments for evidence of possible material misstate- ment due to fraud. Material misstatements of fraud due to fraud often involve the manipulation of the financial reporting process by (a) recording inappropriate or una- uthorized journal entries throughout the year or at period end, or (b) making adjustments to financial statements in the financial statements that are not reflected in formal journal entries, such as through consolidating adjustments, report combinations, and reclassifications. Ac- cordingly, the auditor should design procedures to test the appropriateness of journal entries recorded in the general ledger and other adjust- ments (for example, entries posted directly to financial statement drafts) made in the prepara- tion of the financial statements. More specifical- ly, the auditor should:

(a) Obtain an understanding of the entity’s fi- nancial reporting process and the controls over journal entries and other adjustments. (See paragraphs 59 and 60.)

(b) Identify and select journal entries and other adjustments for testing. (See paragraph 61.)

(c) Determine the timing of the testing. (See paragraph 62.)

(d) Inspect and individuals involved in the financial reporting process about inappropriate or unusual activity relating to the processing of journal entries and other adjustments.

59. The auditor’s understanding of the entity’s financial reporting process may help in identifying the type, number, and monetary value of journal entries and other adjustments that typi- cally are made in preparing the financial state- ments. For example, the auditor’s understanding may identify the sources of significant debits and credits to an account, who can initiate entries to the general ledger or transaction processing systems, what approvals are required for such entries, and how journal entries are recorded (for example, entries may be initiated and recorded online with no physical evidence, or may be created in paper form and entered on a batch mode).

60. An entity may have implemented specific controls over journal entries and other adjust- ments. For example, an entity may use journal entries that are preformatted with account numbers and specific user approval criteria, and may have automated controls to generate an exception report for any entries that were unsuccess- fully proposed for recording or entries that were recorded and processed outside of estab- lished parameters. The auditor should obtain an understanding of the design of these controls over journal entries and other adjustments and determine whether they are suitably designed and have been placed in operation.

61. The auditor should use professional judg- ment in determining the nature, timing, and extent of testing of journal entries and other adjustments. For purposes of identifying and selecting specific entries and other adjust- ments for testing, and determining the appro- priate method of examining the underlying financial statement items selected, the auditor should consider:

- The auditor’s assessment of the risk of material misstatement due to fraud. The presence of fraud risk factors or other conditions may help the auditor assess the appropriateness of journal entries and other adjustments for testing and indicate the extent of testing necessary.

- The effectiveness of controls that have been imple- mented over journal entries and other adjustments. Effective controls over the preparation and processing of journal entries and adjustments may af- fect the extent of substantive testing necessary, provided that the auditor has tested the operat- ing effectiveness of those controls. However, even though controls may be implemented and operating effectively, the auditor’s procedures for testing journal entries and other adjust- ments should include the identification and testing of specific items.

- The entity’s financial reporting process and the nature of the evidence that can be examined. The auditor’s procedures for testing journal entries and other adjustments will vary based on the nature of the financial reporting process. For many entities, routine processing of transactions involves a combination of manual and automated steps and procedures. Similarly, the processing of journal entries and other adjustments might in- clude both manual and automated procedures and controls. Regardless of the method, the auditor’s procedures should include selecting from the general ledger journal entries to be tested and examining support for those items. In addi- tion, the auditor should be aware that journal entries and other adjustments might exist in ei- ther electronic or paper form. When informa- tion technology (IT) is used in the financial re- porting process, journal entries and other adjustments might exist only in electronic form.

Electronic evidence often requires extraction of the desired data by an auditor with IT knowl- edge and skills or the use of an IT specialist. In an IT environment, it may be necessary for the auditor to employ computer-assisted audit tech- niques (for example, report writers, software or data extraction tools, or other systems-based techniques) to identify the journal entries and other adjustments to be tested.

- The characteristics of fraudulent entries or adjust- ments. Inappropriate journal entries and other adjustments often have certain unique identifying characteristics. Such characteristics may include entries (a) made to unrelated, unusual, or seldom-used accounts, (b) made by individuals who typically do not make journal entries, (c) recorded at the end of the period or as post- closing entries that have little or no explanation or description, (d) made either before or dur- ing the preparation of the financial statements that do not have account numbers, or (e) contain- ing round numbers or a consistent ending number.

- The nature and complexity of the accounts. Inap- propriate journal entries and other adjustments may be applied to accounts that (a) contain transactions that are complex or unusual in nature, (b) contain significant estimates and period-end adjust- ments, (c) have been prone to errors in the past, or (d) have been identified by the auditor as having unusual activity or contain unrecorded discrepancies, or (e) are otherwise associated with an identified risk of material misstatement due to fraud. The auditor should consider, however, that journal entries and other adjustments also might be made to other accounts. In audits of entities that have several locations or components, the auditor should consider the need to select journal entries and other adjustments from locations based on the factors set forth in SAS No. 47 (AU sec. 312.18).

- Journal entries or other adjustments processed outside the normal course of business. Standard journal entries used on a recurring basis to record transac- tions such as monthly sales, purchases, and cash disbursements, or to record recurring periodic accounting estimates generally are subject to the entity’s internal controls. Nonstandard entries (for example, entries to record nonrecurring transactions, such as a business acquisition, or entries used to record a nonrecurring estimate, such as an asset impairment) might not be subject to the same level of internal control. In addition, other adjusting and reconcili- dating adjustments, report combinations, and re- classifications generally are not reflected in for- mal journal entries and might not be subject to the entity’s internal controls. Accordingly, the auditor should consider placing additional emphasis on identifying and testing items processed outside of the normal course of business.

62. Because fraudulent journal entries often are made at the end of a reporting period, the au- ditor testing of transactions should focus on the journal entries and other adjustments made at that time. However, because material misstate- ments in financial statements due to fraud can occur throughout the period and may involve extensive efforts to conceal how it is accom- plished, the auditor should consider whether there also is a need to test journal entries throughout the period under audit.

63. Reviewing accounting estimates for biases that could result in material misstatement due to fraud. In preparing financial statements, manage- ment is responsible for making a number of judgments or assumptions that affect significant accounting estimates, and for monitoring the reasonableness of such estimates on an ongoing basis. Fraudulent financial reporting often is accom- plished through intentional misstatement of accounting estimates. As discussed in SAS No. 47 (AU sec. 312.36), the auditor should consid-
EVALUATING AUDIT EVIDENCE

68. Assessing risks of material misstatement due to fraud throughout the audit. The auditor’s assessment of the risks of material misstatement due to fraud should be ongoing throughout the audit. Conditions may be identified during fieldwork that change or support a judgment regarding the assessment of the risks, such as the following:

- Discrepancies in the accounting records, including:
  - Transactions that are not recorded in a complete or timely manner or are improperly recorded as to amount, accounting period, classification, or entity policy
  - Unsupported or unauthorized balances or transactions
  - Last-minute adjustments that significantly affect financial results
  - Evidence of employees’ access to systems and records inconsistent with that necessary to perform their authorized duties
  - Tips or complaints to the auditor about alleged fraud

- Conflicting or missing evidential matter, including:
  - Missing documents
  - Documents that appear to have been altered
  - Unavailable or inconsistent with electronically transmitted documents when documents in original form are expected to exist
  - Mismatched or missing electronic evidence, inconsistent with the entity’s record retention practices or policies
  - Inability to produce evidence of key systems development and program change testing and implementation activities for current-year system changes and deployments

- Problematic or unusual relationships between the auditor and management, including:
  - Denial of access to records, facilities, certain employees, customers, vendors, or others from whom audit evidence might be sought
  - Undue time pressures imposed by management

69. Evaluating whether analytical procedures performed as substantive tests or in the overall review stage of the audit indicate a previously unrecognized risk of material misstatement due to fraud. As discussed in paragraph 68, the auditor should determine whether analytical procedures performed in planning the audit result in identifying any unusual or unexpected relationships that should be considered in assessing the risks of material misstatement due to fraud. The auditor also should evaluate whether analytical procedures that were performed as substantive tests or in the overall review stage of the audit (see SAS No. 56) indicate a previously unrecognized risk of material misstatement due to fraud.

70. If not already performed during the overall review stage of the audit, the auditor should perform analytical procedures relating to revenue and the reversal of access to key IT operations staff and facilities, including security, operations, and systems development personnel.

- An unwillingness to provide access to key IT operations staff and facilities, including security, operations, and systems development personnel
- An unwillingness to add or revise disclosures in the financial statements to make them more complete and understandable

- Unusual and unexpected delays in completing or testing new internal controls
- Unexplained discrepancies in financial statements between current and prior periods

71. Determining which particular trends and relationships may indicate a risk of material misstatement due to fraud requires professional judgment. Unusual relationships involving year-end revenue and income are often particularly relevant. These might include, for example, (a) characteristics that are large amounts of income being reported in the last week of the period, and (b) the relationship between year-end revenues and income, as well as (c) the relationship between trends in cash flow from operations.

72. Some unusual or unexpected analytical relationships may have been identified and may indicate a risk of material misstatement due to fraud. The auditor, therefore, should consider whether the relationships are due to fraud because management or employees generally are unable to manipulate certain information to create seemingly normal or expected relationships. Some examples are as follows:

- The relationship of net income to cash flows from operations may appear unusual because management recorded fictitious revenues and receivables but was unable to manipulate cash.
- Changes in inventory, accounts payable, sales, or cost of sales from the prior period to the current period may be inconsistent, indicating a possible employee theft of inventory, because the employee was unable to manipulate all of the related accounts.
- A comparison of the entity’s profitability to industry trends, which management cannot manipulate, may indicate trends or differences for further consideration when identifying risks of material misstatement due to fraud.
A comparison of bad debt write-offs to comparable industry data, which employees cannot manipulate, may provide unexplained relationships that could indicate a possible theft of cash receipts.

An unexpected or unexplained relationship between sales volume as determined from the accounting records and production statistics matched by operations personnel—which may be more difficult for management to manipulate—may indicate a possible misstatement of sales.

73. The auditor also should consider whether respondents to inquiries throughout the audit about analytical relationships that have been unexplained or implausible, or have produced evidence that is inconsistent with other evidential matter accumulated during the audit.

74. The risks of material misstatement due to fraud at or near the completion of fieldwork. At or near the completion of fieldwork, the auditor should evaluate whether the accumulated results of auditing procedures and analytical procedures, as well as the related example, conditions and analytical relationships noted in paragraphs 69 through 73 affect the assessment of the risks of material misstatement due to fraud made earlier in the audit. This evaluation typically is a qualitative matter based on the auditor’s judgment. Such an evaluation may provide further insight about the risks of material misstatement due to fraud and whether there is a need to perform additional or different audit procedures. As part of this evaluation, the auditor with final responsibility for the audit should ascertain that there has been appropriate communication with the other audit partners throughout the audit regarding information or conditions indicative of risks of material misstatement due to fraud.

75. Responding to misstatements that may be the result of fraud. When audit test results identify misstatements in the financial statements, the auditor should consider whether such misstatements may be indicative of fraud. That determination affects the auditor’s evaluation of materiality and the related responses necessary as a result of that evaluation.

76. If the auditor believes that misstatements are or may be the result of fraud, but the effect of the misstatements is not material to the financial statements, the auditor nevertheless should evaluate the implications, especially those dealing with the organizational position of the person(s) involved. For example, fraud involving misappropriations of cash from a small petty cash fund normally would be of little significance to the auditor in assessing the risk of material misstatement due to fraud because both the manner of operating the fund and its size would tend to establish a limit on the amount of potential loss, and the custodianship of such funds is entrusted to a non-management employee. Conversely, if the matter involves higher-level management, even though the amount itself is not material to the financial statements, it may be indicative of a more pervasive problem and should be reflected in the audit report.

77. If the auditor believes that the misstatement is or may be the result of fraud, and either has determined that the effect could be material to the financial statements or has been unable to evaluate whether the effect is material, the auditor should:

a. Attempt to obtain additional evidential matter to determine whether material fraud has occurred or is likely to have occurred, and, if so, its effect on the financial statements and the auditor’s report thereon.

b. Consider the implications for other aspects of the audit (see paragraph 76).

c. Discuss the matter and the approach for further investigation with an appropriate level of management that is at least one level above those involved, and with senior management and the audit committee.

d. If appropriate, suggest that the client consult legal counsel when considering withdrawal from an engagement.

78. The auditor’s consideration of the risks of material misstatement and the results of audit tests may indicate such a significant risk of material misstatement due to fraud that the auditor should consider withdrawing from the engagement and communicating the reasons for withdrawal to the audit committee or others with equivalent authority and responsibility. Whether the auditor concludes that withdrawal from the engagement is appropriate may depend on (a) the implications about the integrity of management and (b) the diligence and cooperation of management or the board of directors in investigating the circumstances and taking appropriate action. In view of the variety of circumstances that may arise, it is not possible to definitively describe when withdrawal is appropriate. The auditor may wish to consult with legal counsel when considering withdrawal from an engagement.

79. Whenever the auditor has determined that there is evidence of fraud that may exist, that matter should be brought to the attention of an appropriate level of management. This is appropriate even if the matter might be considered inconsequential, such as a minor defalcation by an employee at a low level in the entity’s organization. Fraud involving senior management and fraud (whether caused by senior management or other employees) that causes a material misstatement of the financial statements should be reported directly to the audit committee. In addition, the auditor should reach an understanding with the audit committee regarding the nature and extent of communications with the committee about misappropriations perpevted by lower level employees.

80. If the auditor, as a result of the assessment of the risks of material misstatement, has identified risks of material misstatement due to fraud that have continuing control implications (whether transactions or other events that could be the result of fraud have been detected), the auditor should consider whether these risks represent reportable conditions relating to the entity’s internal control that should be communicated to senior management and the audit committee. (See SAS No. 68, Communication of Internal Control Related Matters Noted in an Audit [AICPA, Professional Standards, vol. 1, AU sec. 325.04].) The auditor also should consider whether the organization’s fraud prevention and detection controls are adequate to mitigate specific risks of fraud or to otherwise help prevent, detect, and deter fraud (see paragraph 44) represent reportable conditions that should be communicated to senior management and the audit committee.

81. The auditor also may wish to communicate other risks of fraud identified as a result of the audit as material misstatements that may be a part of an overall communication to the audit committee of business and financial statement risks affecting the entity and/or in conjunction with the auditor communication about the efficiency of the entity’s adjusting principles (see SAS No. 61, AU sec. 380.11).

82. The disclosure of possible fraud to parties other than the client’s senior management and its audit committee ordinarily is not part of the auditor’s responsibilities. If the auditor, subsequent to the date of the report on the audited financial statements, becomes aware that facts existed at that date that might have affected the report had the auditor been aware of such facts, the auditor should refer to SAS No. 1, Compilation of Auditing Standards and Procedures [AICPA Professional Standards, vol. 1, AU sec. 361]. "Subsequent Discovery of Facts Existing at the Date of the Auditor’s Report" provides guidance for further communication.

83. SAS No. 84, Communications Between Predecessor and Successor Auditors (AU sec. 315.01 and 22) provides guidance regarding communication with a predecessor auditor.

84. The requirements to communicate noted in paragraphs 79 through 82 extend to any intentional misstatement of financial statements (see paragraph 3). However, the communication may take terms other than fraud—for example, irregularity, intentional misstatement, misappropriation, or defalcation—if there is possible confusion with a legal definition of fraud or other reason to prefer alternative terms.

85. Alternatively, the auditor may decide to communicate solely with the audit committee.
auditor’s responsibility and ordinarily would be precluded by the auditor’s ethical or legal obligations of confidentiality unless the matter is referred in the auditor’s report. The auditor should recognize, however, that in the following circumstances a duty to disclose to parties outside the entity may exist:

a. To comply with certain legal and regulatory requirements.

b. To a successor auditor when the successor makes inquiries in accordance with SAS No. 84, Communications Between Predecessor and Successor Auditors (AICPA, Professional Standards, vol. 1, AU sec. 315).

c. In response to a subpoena.

d. To a funding agency or other specified agency in accordance with requirements for the audits of entities that receive governmental financial assistance.

Because potential conflicts between the auditor’s ethical and legal obligations for confidentiality of client matters may be complex, the auditor may wish to consult with legal counsel before discussing matters covered by paragraphs 79 through 81 with parties outside the client.

Documenting the Auditor’s Consideration of Fraud

83. The auditor should document the following:

- The discussion among engagement personnel in planning the audit regarding the susceptibility of the entity’s financial statements to material misstatement due to fraud, including how and when the discussion occurred, the audit team members who participated, and the subject matter discussed (See paragraphs 14 through 17).

- The procedures performed to obtain information necessary to identify and assess the risks of material misstatement due to fraud (See paragraphs 19 through 34).

- Specific risks of material misstatement due to fraud that were identified (see paragraphs 35 through 45), and a description of the auditor’s response to those risks (See paragraphs 46 through 56).

- If the auditor has not identified in a particular circumstance, improper revenue recognition as a risk of material misstatement due to fraud, the reasons supporting the auditor’s conclusion (See paragraph 41).

- The results of the procedures performed to further address the risk of management override of controls (See paragraphs 58 through 67).

- Other conditions and analytical relationships that caused the auditor to believe that additional auditing procedures or other responses were required and any further responses the auditor

concluded were appropriate, to address such risks or other conditions (See paragraphs 68 through 73).

The nature of the communications about fraud made to management, the audit committee, and others (See paragraphs 79 through 82). Effectiveness 84. This Statement is effective for audits of financial statements for periods beginning on or after December 15, 2002. Early application of the provisions of this Statement is permissible.

AMENDMENT TO STATEMENT ON AUDITING STANDARDS NO. 1: CODIFICATION OF AUDITING STANDARDS AND PROCEDURES (AICPA, Professional Standards, vol. 1, AU sec. 230, "Due Professional Care in the Performance of Work")

1. This Statement amends Statement on Auditing Standards No. 1, Codification of Auditing Standards and Procedures (AICPA, Professional Standards, vol. 1, AU sec. 230.120, "Due Professional Care in the Performance of Work") to include a discussion about the characteristics of fraud and a discussion about collusion. (The new language is shown in boldface italics; deleted language is shown by strikethrough.)

Reasonable Assurance

10. The exercise of due professional care allows the auditor to obtain reasonable assurance that the financial statements are free of material misstatement, whether caused by error or fraud. Absolute assurance is not attainable because of the nature of audit evidence and the characteristics of fraud. Therefore, an audit conducted in accordance with generally accepted auditing standards may not detect a material misstatement.

11. The independent auditor’s objective is to obtain sufficient competent evidential matter to provide him or her with a reasonable basis for forming an opinion. The nature of most evidence derives, in part, from the concept of selective testing of the data being audited, which involves judgment regarding both the area to be tested and the nature, timing, and extent of the tests to be performed. In addition, judgment is required in interpreting the results of audit testing and evaluating audit evidence. Even with good faith and integrity, mistakes and errors in judgment can be made. Furthermore, accounting presentations contain accounting estimates, the measurement of which is inherently uncertain and depends on the outcome of future events. The auditor exercises professional judgment in evaluating the reasonableness of accounting estimates based on information that could reasonably be expected to be available prior to the completion of field work. As a result of these factors, in the great majority of cases, the auditor has to rely on evidence that is persuasive rather than convincing.

12. Because of the characteristics of fraud, particularly the likelihood that fraud-related documentation is altered, a properly planned and performed audit may not detect a material misstatement. Characteristics of fraud include (a) concealment through collusion and management, employees, or third parties; (b) withheld, misrepresented, or falsified documentation; and (c) the ability of management to override or inhibit others’ attempts to detect or correct the fraud. For example, an audit conducted in accordance with generally accepted auditing standards rarely involves authentication of documentation, nor are auditors trained as or expected to be experts in such authentication. In addition, auditors may not discover the existence of a modification of documentation through a side agreement that management or a third party has not disclosed. Finally, management has the ability to directly or indirectly manipulate accounting records and present fraudulent financial information by overriding controls in unpredictable ways.

13. Since the auditor’s opinion on the financial statements is based on the concept of obtaining reasonable assurance, the auditor is not an insurer and his or her report does not constitute a guarantee. Therefore, the subsequent discovery that a material misstatement, whether from error or fraud, exists in the financial statements does not, in and of itself, evidence (a) failure to obtain reasonable assurance, (b) inadequate planning, performance, or judgment, (c) the absence of due professional care, or (d) a failure to comply with generally accepted auditing standards.

AMENDMENT TO SAS NO. 85, MANAGEMENT REPRESENTATIONS (AICPA, Professional Standards, vol. 1, AU sec. 333.06, and Appendix A)

1. This Statement requires the auditor to make inquiries of management about fraud and the risk of fraud. In support of and consistent with these inquiries, this amendment revises the guidance for management representations about fraud currently found in SAS No. 85, Management Representations (AICPA, Professional Standards, vol. 1, AU sec. 333, paragraph 6h, and Appendix A). New language is shown in boldface italics; deleted language is shown by strikethrough.

a. Management’s acknowledgment of its responsibility for the design and implementation of programs and controls to prevent and detect fraud.

b. Knowledge of fraud or suspected fraud affecting the entity involving (1) management, (2) employees who have significant roles in
We are providing this letter in connection with your audit(s) of the [identification of financial statements] of [name of entity] as of [date] and for the [period] for the purpose of expressing an opinion as to whether the [unaudited] financial statements present fairly, in all material respects, the financial position, results of operations, and cash flows of [name of entity] in conformity with accounting principles generally accepted in the United States of America. We confirm that we are responsible for the fair presentation in the [unaudited] financial statements of financial position, results of operations, and cash flows in conformity with generally accepted accounting principles.

Certain representations in this letter are described as being limited to matters that are material. Items that are considered material, regardless of size, if they involve an omission or misstatement of accounting information that, in the light of surrounding circumstances, makes it probable that the judgment of a reasonable person relying on the information would be changed or influenced by the omission or misstatement.

We confirm, to the best of our knowledge and belief, [as of (date of auditor's report)], the following representations made to you during your audit(s):

1. The financial statements referred to above are fairly presented in conformity with accounting principles generally accepted in the United States of America.
2. We have made available to you all—
   a. Financial records and related data.
   b. Minutes of the meetings of stockholders, directors, and committees of directors, or summaries of actions of recent meetings for which minutes have not yet been prepared.
3. There have been no communications from regulatory agencies concerning non-compliance with governmental regulations or deficiencies in financial reporting practices.
4. There are no material transactions that have not been properly recorded in the accounting records underlying the financial statements.
5. We believe that the effects of the uncorrected financial statement misstatements summarized in the accompanying schedule are immaterial, both individually and in the aggregate, to the financial statements taken as a whole.

We acknowledge our responsibility for the design and implementation of programs and controls to prevent and detect fraud.

We have no knowledge of any fraud or suspected fraud affecting the entity involving—

a. Management, Fraud involving management or employees who have significant roles in the internal control,
   b. Employees who have significant roles in internal control, or
   c. Fraud involving others where the fraud could have a material effect on the financial statements.

We have no knowledge of any allegations of fraud or suspected fraud affecting the entity received in communications from employees, former employees, analysts, regulators, short sellers, or others.
